

BlueBox & Business Objects

Your BlueBox property system is in place rent and service charge accounting is fully functional and the workflow-driven purchase order management is keeping your expenditure under control. Now, with Business Objects, your users can start to gain real benefit from the wealth of data being generated: querying the data they see, performing analytical comparisons on property performance across the portfolio, and measuring key performance indicators.

Business Objects sits seamlessly within BlueBox, accessing the data through any of the purpose designed Business Objects Universes that make it fast and efficient for reporting and “slice and dice” analysis.

Other benefits

- Business Objects reports can combine data from multiple data sources
- Remote users can access and run reports over the Web
- Business Objects can provide a single point of entry for all system enquiries
